- Zip

ARPANET is an acronym for:

- Advanced Research Project Agency Network

Wireless LAN technology is built-in to connect devices with wiring

- FALSE

\_\_\_\_\_ Cards allow computers to produce colour

- Colour

As \_\_\_\_\_ increasingly is the standard interface for networks, these distinctions are more important to the network administrator than the user

- Ethernet

The uses of network consist of the following except

- Transportation of goods

Limitations of PC-Internet based ICT include all except

-

None of the above

Microsoft Office is an example of software -----

.  
System

The SDLC is a means of charting system development and controlling cost and time on project

.  
TRUE

A supercomputer is focused on performing one task involving intense \_\_\_\_\_ such as weather forecasting and solving scientific problems

.  
Numerical calculations

\_\_\_\_\_ coordinates the assignment of unique identifiers on the Internet

.  
ICANN

Computer errors and software failures happen occasionally so it is important to \_\_\_\_\_ your files and documents

.  
Backup

The system development life cycle is triggered either by problems, opportunities or \_\_\_\_\_

.  
Directives

Spreadsheets are used to work with \_\_\_\_\_ information

.  
Financial

Some policies to ensure that there is access of ICT for the poorest masses include all but

.  
Free provision of internet to all citizens

All electronic equipment emit some level of \_\_\_\_\_ emission

.  
Electromagnetic

VDT is an acronym for

.  
Video Display Unit

One of these is not part of job characteristics

.  
Agility

\_\_\_\_\_ uses both word processing and graphics to produce publications and presentations

.  
Desktop publishing
